Version: 1.1

Status: Draft

Created By: Ana Sol Gutierrez Updated By: Brett Polloway Created On: 08/21/00 Updated On: 08/02/04 Page 1 of 15

1.2 Escalate Request Issues

Introduction

This process group defines the actions to be undertaken by the Applications Management Group to ensure that issues relating to requests, that cannot be handled by the standard Manage Request Issues Process, are escalated for resolution to the appropriate resources (governing body, external service providers, etc.). This Process Group is currently composed of only one sub-process (1.2.1 Monitor and Resolve Escalated Request Issue) which:

- □ Identifies escalation criteria, escalation paths and organizational interfaces between Applications Management, SFA, and other service providers involved in closing a Request Issue;
- Monitors escalated Request Issues until closure is warranted;
- □ Interfaces with the Manage Request Issues and the Communicate and Provide Feedback to Users Process.

<u>Definition</u>: An **issue** is one that might adversely affect a request/release's budget, quality, schedule, performance, system service or system design, and likely goes beyond the authority of an individual or project team to resolve. An issue is not a team member's difference of opinion, complaint, request or day-to-day concern. Issues have occurred, are resolved with action items, and at times, follow a defined escalation process. Examples of issues that would follow this process include issues that cannot be resolved by one phone call, are not covered or answered by standard guidelines, and that are controversial between areas and/or important to a large group within SFA.

Tip: While reading through the following section please be aware that Inputs, Entrance Criteria, Outputs and Exit Criteria can either be required or not required. This level of detail will be included within the documented steps throughout the process.

Process Owner:	Application Manager
Supplier(s):	Users of the supported application, Applications Management Team
	Members, governance body members
Customer(s):	Applications Management Team Members (Internal Customer), Users
	of the Application (External Customer)
*Input(s):	An issue arises from a status report, is escalated and is logged in the
	Request Issues Management Tracking Tool.
	An issue arises from a meeting, is escalated and is logged in the
	Request Issues Management Tracking Tool.
	An issue arises at any point during the lifecycle of a request for service,
	is escalated and is logged in the Request Issues Management Tracking
	Tool.

Created By: Ana Sol Gutierrez Created On: 08/21/00 Version: 1.1 Page 2 of 15 Updated By: Brett Polloway Updated On: 08/02/04 Status: Draft

*Entrance Criteria:	An issue (see definition above) has been identified after a meeting,
	upon review of status reports or during the lifecycle of a request for
	service and has been escalated.
*Output(s):	The Request Issues Management Tracking Tool and Request Database
	is updated as to the status of the escalated issue.
	The Request Issues Management Tracking Tool is updated and an
	escalated issue is determined to be a change in scope to an existing
	request for service. (The Receive and Log User Request would be re-
	entered if this was the case.)
	Action items - It is possible that action items occur after an issue is
	discussed. The Request Issues Management Tracking Tool (comments
	section, etc. should be updated).
*Exit Criteria:	An escalated issue has been monitored until closure is warranted.
	An escalated issue has been discussed and determined to be a new
	request for service.
Related Processes:	Receive and Log User Request

1.2.1 Monitor and Resolve Escalated Request Issue

Introduction

This process defines the actions to be undertaken by the Applications Management Group to ensure that issues relating to requests, that cannot be handled by the standard Manage Request Issues Process, are escalated for resolution to the appropriate resources (governing bodies, external service providers, etc.). This Process:

- □ Identifies escalation criteria, escalation paths and organizational interfaces between Applications Management, SFA, and other service providers involved in closing a Request Issue;
- □ Monitors escalated Request Issues until closure is warranted;
- Interfaces with the Manage Request Issues and the Communicate and Provide Feedback to Users Process.

Objectives:

The main objectives of the Monitor & Resolve Escalated Request Issue Process are to:

- □ Facilitate the identification and timely resolution of escalated issues (if resolvable);
- □ Facilitate the communication and closure of escalated issues;
- □ Ensure all parties needed to resolve an escalated issue are informed and, if applicable, are active participants;
- Ensure that all escalated issues are resolved in a timely manner and;
- Assist in effectively capturing, defining and analyzing an escalated issue.

The Monitor & Resolve Escalated Request Process defines the steps for the identification, capturing, analysis, management, resolution, communication and reporting of escalated request issues. It can be entered at any time during the lifecycle of a request for service.

<u>Definition</u>: An **issue** is one that might adversely affect a request/release's budget, quality, schedule, performance, system service or system design, and likely goes beyond the authority of an individual or project team to resolve. An issue is not a team member's difference of opinion, complaint, request or day-to-day concern. Issues have occurred, are resolved with action items, and at times, follow a defined escalation process. Examples of issues that would follow this process include issues that cannot be resolved by one phone call, are not covered or answered by standard guidelines, and that are controversial between areas and/or important to a large group within SFA.

Benefits:

Created By: Ana Sol Gutierrez Created On: 08/21/00 Version: 1.1 Page 9 of 15 Updated By: Brett Polloway Updated On: 08/02/04 Status: Draft

The main benefits of the Manage Request Issues Process are:

- □ Accountability and Ownership of an escalated issue is clearly defined;
- □ All Stakeholders have access to an escalated issue's status;
- □ Ensures the communication and documentation of the closure of an escalated issue and;
- □ Allows for accurate and necessary metrics collection.

^{*} Tip: While reading through the following section please be aware that Inputs, Entrance Criteria, Outputs and Exit Criteria can either be required or not required. This level of detail will be included within the documented steps throughout the process.

Process Owner:	Application Manager
Supplier(s):	Users of the supported application, Applications Management Team Members
Customer(s):	Applications Management Team Members (Internal Customer), Users
	of the (External Customer)
*Input(s):	An issue arises at any point during the lifecycle of a request for service,
	is escalated and is logged in the Request Issues Management Tracking
	Tool.
	An issue arises from a status report, is escalated and is logged in the
	Request Issues Management Tracking Tool.
	An issue arises from a meeting, is escalated and is logged in the
	Request Issues Management Tracking Tool.
*Entrance Criteria:	An issue (see definition above) has been identified after a meeting,
	upon review of status reports or during the lifecycle of a request for
	service and has been escalated.
*Output(s):	The Request Issues Management Tracking Tool and Request Database
	is updated as to the status of the escalated issue.
	The Request Issues Management Tracking Tool is updated and an
	escalated issue is determined to be a change in scope to an existing
	request for service. (The Receive and Log User Request would be re-
	entered if this was the case.)
	Action items – It is possible that action items occur after an issue is
	discussed. The Request Issues Management Tracking Tool (comments
	section, etc. should be updated).
*Exit Criteria:	An escalated issue has been monitored until closure is warranted.
	An escalated issue has been discussed and determined to be a new
	request for service.
Related Processes:	Receive and Log User Request
	Manage Request Issues
	Communicate and Provide Feedback to Users

Process Workflow Description

Step #	Step Description	Responsibility	Tools	Deliverables/ Outcomes
Start				
1.	Verify Exit Criteria - In order to enter the Monitor and Resolve Escalated Request Issue Process, the Issue Owner must verify that all entrance criteria have been met.	Issue Owner (Most likely Team Lead)	Request Database, Request Issues Management Tracking Tool	N/A
2.	Re-validate Escalated Issue – The Issue Owner is responsible for researching the Request Database and the Request Issues Management Tracking Tool and validating that certain fields have been flagged correctly. The escalation indicator field in the Request Database and in the Tracking Tool should be "Y".	Issue Owner (Most likely Team Lead)	Request Issues Management Tracking Tool	N/A
3.	Validate Escalation Participants – The Issue Owner is responsible for validating who is needed to resolve an issue that has been escalated. Managers and Team Leads might provide assistance during this step. Responsibility should have been previously discussed in the Manage Request Issues Process (during the status meetings step).	Issue Owner (Most likely Team Lead)	Request Issues Management Tracking Tool	N/A
4.	Define/Communicate Escalation Meeting Agenda – The Issue Owner is responsible for creating a meeting agenda and logistics in order to facilitate the effective closure of an escalated issue. The communication of the agenda should be via email or interoffice mail.	Issue Owner (Most likely Team Lead)	Request Issues Management Tracking Tool	N/A
